                                                                                                                                                                                                                                                                                   The present sequence encodes a human histamine receptor. The polypeptide is useful for identifying an agonist or antagonist of a mammalian of listamine receptor. It is useful as an antigen to elicit the production of antibodies. The histamine receptor polypeptide and polymuclectide are useful in the treatment and management of diseases such as inflammation, asthma, allergy, atopic dermatitis, strok, myocardial infection, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, inositol phosphate and mitogen activated protein (MAP) kinase), changes in cellular growth rate, secretion of hormones, receptor-stimulated Ca2+
                                                                                                                                                                                   Novel mammalian histamine receptor polypeptide useful for identifying agonist or antagonist for treating diseases such as inflammation, asthma, stroke, migraine, rheumatoid arthritis, multiple sclerosis, psoriasis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                             The present sequence is that of cDNA clone pH4R encoding a human histamine receptor of the H4 subtype. The cDNA was isolated from a bone marrow cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAT70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the human histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allerange may be useful for diagnosing, treating or preventing asthma, insulin dependent diabetes mellitus, hyperglycemia, constipation, insulin dependent diabetes mellitus, hyperglycemia, constipation, arxhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

The invention provides an isolated histamine receptor, H4, which binds ligands comprising imidazole attached to amine by an alkyl chain. The H4 receptor can be expressed by standard recombinant methodology. Cells expressing H4 receptor protein at a detectable level can suppress cyclic adenosine monophosphare (cAMP) formation when contacted with the H4 receptor agonist. The H4 receptor and antibodies are used for identifying H4 receptor modulators. Modulation of histamine H4 receptors is useful for treating transplanted organ rejection, asthma, allergies and autoimmune pathologies such as multiple sclerosis, type I diabetes, protein and nucleic acids are useful targets to identify drugs that are effective in treating disorders associated with histamine-regulated processes. Identification and isolation of H4 receptor provides for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             development of screening of molecules that interact with H4 receptors. Genetic variants of H4 can be used to diagnose an H4 associated disease as described above. The H4 receptor polynucleotide is useful to treat or prevent a disorder associated with the function of H4 in peripheral blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      81 AsnPheGlySerGlyIleCysMetPheTrpLeuIleThrAspTyrLeuLeuCysThrAla 100

The invention relates to a human G protein-coupled receptor (GPCR)
appearing as ABU92259-ABU92277 (encoded by CDNAs ACA93256-ACA93274) named
hare-3, hARE-4, hARE-5, hRUPS, hRUPS, hRUPS, hRUPS, hROFRZT, hARE-1, hARE
-2, hPPR1, hG2A, hCHN3, hCHN4, hCHN6, hCHN8, hCHN9, hCHN10 and hRUP4.
Also included are a plasmid comprising a vector and one of the CDNAs
chove and a host cell comprising the plasmid. The GPCRs are useful for
the direct identification of candidate compounds as inverse agonists,
agonists or partial agonists. In vitro and in vivo systems incorporating
GPCRs is useful for elucidating and understanding the roles these
creceptors play in the human condition, both normal and diseased, as well
as understanding the signalling cascade. The CDNAs are useful for making a
understanding the signalling cascade. The CDNAs are useful for making a
dientification of the expression of the receptor in tissue samples. The
present sequence is a CDNA encoding a GPCR of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel endogenous, orphan, human G protein-coupled receptors useful identification of modulators of the receptor and as research tools understanding the role of the receptor in human body.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BP; 294 A; 245 C; 231 G; 403 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides novel human G protein-coupled receptor (GPCR) proteins and their encoding nucleic acids. The invention is useful for making a probe for dor-blot analysis and for RT-PCR identification of the expression of the receptor in tissue samples. The invention is also useful for identifying candidate compounds as inverse agonists, agonists or partial agonists and as research tools in determining the location of the receptors within the body. The present sequence is human orphan G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New cDNA encoding a human G protein coupled receptor, useful for making probe for dot-blot analysis against tissue-mRNA, and/or for RT-PCR identification of the expression of the receptor in tissue samples.

polynucleotide (and its homologues, variants, complements and RNA equivalents). Also included are an anti-AXOR35 antibody, an AXOR35 expression vector, producing a recombinant host cell by introducing the vector into a cell such that the host cell broduces AXOR35, a membrane of the host cell expressing AXOR35, identifying/screening for agonists or antagonists of AXOR35 and inhibiting or promoting the function of lymphocytes, macrophages, eosinophils, or neutrophils in diseased tissue, by administering to the patient AXOR35 agonists or antagonists. The agonist or antagonist identified is useful for treating a disease such as atthma, or for inhibiting or promoting the function of lymphocytes, macrophages, eosinophils, or neutrophils in diseased tissue such as an asthmatic lung. AXOR35 or polynucleotide is useful in diagnostic assays, for identifying compounds that are agonists or antagonists of AXOR35, as increased the area of a such as a continuous compounds that are agonists or antagonists of AXOR35, as increased.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email S. Wiemann@dKfz- heidelberg.de;
sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
consortium of the German Genome Project.
No 81 sequence available.
This clone (DKFZp781C0629) is available at the RZPD in Berlin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hominidae, Homo.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
